Project Executable Files

Date	09 July 2026
Team ID	SWUID2026203110
Project Name	Personalized Networking Assistant
Maximum Marks	3 Marks

Project Executable Files

Step 1: Submission Checklist

S.No	Item to Submit	Submitted (Yes / No / NA)
1	Complete source code (all files and folders)	Yes
2	README / Setup Guide (instructions to run the project)	Yes
3	requirements.txt / package.json / dependency file	Yes
4	Database schema / seed files (if applicable)	NA (JSON storage used instead of database)
5	Environment configuration file (.env.example or similar)	Yes
6	Deployed application URL (if hosted)	Yes
7	APK / Executable binary (if applicable for mobile/desktop apps)	NA
8	Dockerfile / Containerization config (if applicable)	No
9	Test files and test results	Yes
10	Demo video or walkthrough (if required)	Yes

Step 2: File / Folder Structure

Provide an overview of your project's file and folder structure below:

```
Personalized-Networking-Assistant/
│
├── app/
│   ├── main.py
│   ├── routers/
│   │   └── conversation.py
│   ├── models/
│   │   └── schemas.py
│   ├── services/
│   │   ├── event_analyzer.py
│   │   ├── topic_generator.py
│   │   ├── fact_checker.py
│   │   ├── history_logger.py
│   │   └── feedback_logger.py
│
├── frontend/
│   ├── app.py
│   └── assets/
│
├── tests/
│   ├── test_routes.py
│   ├── test_event_analyzer.py
│   ├── test_topic_generator.py
│   └── test_fact_checker.py
│
├── history.json
├── feedback.json
├── requirements.txt
├── README.md
├── .env.example
└── LICENSE
```

Step 3: Deployment / Access Details

Field	**Details**
Hosted / Deployed URL	Not Hosted (Runs Locally)
Login Credentials (Demo)	Not Required
Platform / Hosting Provider	Localhost
Repository Link	https://github.com/K3rthana80/Networking_Assistant.git

Demo Video Link	https://github.com/K3rthana80/Networking_Assistant.git

Step 4: Run Instructions

Provide clear, step-by-step instructions for the evaluator to run your project locally:

Prerequisites

- Python 3.11 or later
- Visual Studio Code (Recommended)
- Git (Optional)

Step 1

Clone the repository.

git clone https://github.com/your-username/personalized-networking-assistant.git

Step 2

Navigate to the project directory.

cd personalized-networking-assistant

Step 3

Create a virtual environment.

Windows

python -m venv venv

Linux/Mac

python3 -m venv venv

Step 4

Activate the virtual environment.

Windows

venv\Scripts\activate

Linux/Mac

source venv/bin/activate

Step 5

Install project dependencies.

pip install -r requirements.txt

Step 6

Run the FastAPI backend.

uvicorn app.main:app --reload

Backend URL

http://127.0.0.1:8000

Swagger Documentation

http://127.0.0.1:8000/docs

Step 7

Open a new terminal and run the Streamlit frontend.

streamlit run frontend/app.py

Frontend URL

http://localhost:8501

Step 8

Use the application to:

- Generate networking conversation starters.
- Analyze event themes.
- Perform fact checking.
- View conversation history.
- Submit feedback.

Step 9

Run the test suite.

pytest

For coverage:

pytest --cov=app

Step 5: Known Issues / Limitations

S.No	Known Issue / Limitation	Workaround / Status
1	GPT-2 responses may occasionally repeat phrases.	Minor post-processing removes duplicates.
2	Fact checking depends on Wikipedia availability and internet connectivity.	Displays a user-friendly error message if the service is unavailable.
3	Conversation history and feedback are stored in local JSON files instead of a database.	Suitable for educational and local deployments; can be replaced with a database in future versions.
