

Problem-Solution Fit

Date	June 2026
Team ID	XXXXXXXX
Project Name	NetworkingAssistant
Maximum Marks	5 Marks

Problem-Solution Fit Canvas

Use the framework below to ensure the proposed solution accurately addresses the root causes, behaviors, and limitations of the target audience for the NetworkingAssistant project.

Section	Description
1. Customer Segments (CS)	College Students, Fresh Graduates, Job Seekers, Working Professionals, Researchers, Entrepreneurs, Conference Participants and Networking Event Attendees.
2. Problems / Pains (PR)	Difficulty initiating conversations, lack of confidence, generic networking suggestions, limited understanding of event topics, inability to verify facts quickly, and no way to track previous networking interactions.
3. Triggers to Act (TR)	Career fairs, technical conferences, workshops, seminars, networking events, alumni meets and hackathons.
4. Emotions (EM)	Before: Nervous, hesitant, underprepared, anxious. After: Confident, prepared, engaged and motivated.
5. Available Solutions (AS)	LinkedIn, ChatGPT, Google Search and networking blogs. Pros: Rich information and networking support. Cons: Generic recommendations, no event-specific personalization, no integrated fact verification and no conversation history.
6. Customer Limitations (CL)	Limited networking experience, time constraints, lack of confidence, limited knowledge of event topics and information overload.
7. Behavior & Intensity (BE)	Users research speakers, browse LinkedIn profiles, search event topics and use AI tools before attending events. Intensity: High before networking events.
8. Channels of Behavior (CH)	Online: LinkedIn, GitHub, AI Chatbots, Webinars, Professional Forums. Offline: Conferences, Workshops, Seminars, Career Fairs and College Events.
9. Problem Root Cause (RC)	Lack of personalized networking guidance, insufficient event context, low confidence in initiating conversations, inability to verify facts instantly and absence of personalized networking history.
10. Your Solution (SL)	NetworkingAssistant uses DistilBERT to extract event

	themes, GPT-2 to generate personalized conversation starters, Wikipedia API for fact verification, and FastAPI + Streamlit with JSON-based history and feedback logging to deliver an intelligent, personalized networking experience.
