

Project Initialization and Planning Phase

Date	June 2026
Team ID	XXXXXXX
Project Title	NetworkingAssistant
Maximum Marks	5 Marks

Project Proposal (Proposed Solution) Report

The proposed NetworkingAssistant solution leverages Generative AI to help users build meaningful professional connections. By combining DistilBERT for event theme extraction, GPT-2 for personalized conversation generation, Wikipedia API for fact verification, and FastAPI with Streamlit, the system provides an intelligent, modular, and interactive networking assistant.

Section	Details
Project Overview - Objective	Develop an AI-powered NetworkingAssistant that analyzes event descriptions, extracts themes, generates personalized conversation starters, verifies facts, and maintains conversation history to improve users' networking confidence and effectiveness.
Project Overview - Scope	The system supports students, professionals, researchers, and conference attendees by providing personalized networking suggestions, event analysis, fact checking, and feedback-driven recommendations through a web application.
Problem Statement - Description	Many users struggle to initiate meaningful conversations during networking events due to lack of preparation, limited topic knowledge, and low confidence. Existing solutions do not provide personalized event-aware conversation assistance.
Problem Statement - Impact	Addressing these challenges improves networking confidence, increases professional engagement, enhances communication quality, and enables better career and collaboration opportunities.
Proposed Solution - Approach	Use DistilBERT to identify event themes, GPT-2 to generate context-aware conversation starters, Wikipedia API for quick fact verification, and FastAPI + Streamlit for backend/frontend integration with JSON-based history and feedback logging.
Proposed Solution - Key Features	• AI-powered event analysis • Personalized conversation starters • Real-time fact verification • Conversation history • Feedback logging • Interactive Streamlit UI • FastAPI REST APIs

Resource Requirements

Resource Type	Description	Specification / Allocation
Hardware	Processor	Intel i5/Ryzen 5 or above
Hardware	Memory	8 GB RAM or above
Hardware	Storage	20 GB Free Disk Space
Software	Frameworks	FastAPI, Streamlit
Software	Libraries	Transformers, Wikipedia API, Pytest, Httpx
Software	Development Environment	Python 3.11+, VS Code/PyCharm
Data	Storage	history.json, feedback.json (Local JSON)
